

FULL SPECTRUM LED FLOOR LAMP

Led Floor lamp Assembly Instructions:

BEFORE YOU BEGIN:

1. Never pull the power cord when removing the lamp from the packaging.
2. Remove all packing material and tape from the lamp.
3. Read all instructions carefully before you begin assembly.

ASSEMBLY INSTRUCTIONS:

Take all the lamp parts out of the carton and set them aside.

1. Start by feeding the power wires for the lamp head through the 2-part lamp shaft so they project out of the bottom of the shaft.
2. Be sure that the shaft is right-side-up. NOTE: there are stickers at the bottom end of each shaft section to indicate the correct direction.
3. With the head still not connected to the shaft, connect the wires at the bottom of the shaft to the lamp base. Make sure to match the wire colors-black to black and white (or blue) to white.
4. With wires connected, slide lower-shaft section down onto base plug taking care not to pinch the wires. Next, connect the upper and lower shaft sections- Excess wire should be doubled-up where the 2 shaft sections meet. Be careful to tuck all excess wire safely inside the shaft and avoid pinching wire with the shaft.
5. Connect the two shaft sections, the base and the lamp head with the screws provided.
 - It is help to set the base flat on the floor or a level and stable surface such as a table. Make sure that the screw holes line up correctly. If the holes do not line up nicely, it's possible that one or both shaft sections are upside-down. You may need to push downward on the shaft and wiggle it some to get full connection. NOTE: be careful not to pinch your fingers, grab the shaft well above the connection point.
 - Using the screws provided, fasten the bottom shaft to the base plug with a Philips screw driver(not provided).
 - Connect the two shaft sections together.
 - Connect the lamp head to the shaft. Carefully tuck excess wire into the shaft while being cautious not to pinch the wires OR yourself in the process.
6. Check the lamp for straight and tight assembly. Carefully plug lamp into adequate power supply and test proper function.
7. To clean the lamp, wipe with a soft, clean cloth. Not no use polishes or cleaners.

DO NOT USE NEAR FLAMBLE OR COMBUSTABLE MATERIALS KEEP LAMPS AT LEAST 7 INCHES AWAY FROM WALLS AND OBJECTS.

SAVE THIS INSTRUCTION FOR FUTURE USE.
